

QUALITY CONTROL

QUALITY ASSURANCE

On behalf of Allenbuild Ltd South East Region I confirm our commitment to the achievement of quality, not only in the respect of our client needs but also for the sustainable growth of the Region.

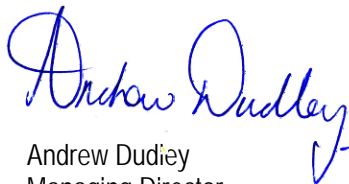

The principles of Quality Assurance relate to the ISO 9001:2008 and ensure rigorous guidelines for the control of administration of contracts undertaken by the Region.

The Policy of Allenbuild Ltd South East Region is to support and maintain a quality system that complies with the established Standards. As a result of this quality system the Region has gained Certification with SGS Yarsley International Certification Services Ltd to ISO 9001:2008. As an assurance that the quality system is maintained the Region is audited every six months by this accreditation body.

Allenbuild Ltd South East Region has also achieved ISO 14001:2004 – Environmental Management System Certification.

To maintain the quality system within contracts, a Quality Inspection Plan is issued for each contract and Site Quality Plans are produced to cover the construction activities. These plans detail the exact points when workmanship inspections will be undertaken to ensure that the quality is maintained throughout the contract.

The Region first gained accreditation in 1990 and since then it has developed a culture of total quality control. The latest external audit reported that there was good evidence of compliance in each of the areas audited. They concluded that it was a good example of an organisation making Quality Assurance systems work for the benefit of themselves and their clients.
